GREEN PROCUREMENT GUIDELINE

7TH EDITION

1. Purpose

In this guideline, We, Star Micronics Co., Ltd. (hereinafter referred to as "Star") are pleased to notify you of concrete requirements, and procedures based on Star's principles toward the "Green Procurement".

The Green procurement is to affirmatively procure products, parts, assembled units, components and so forth, which is environment-friendly designed, manufactured and supplied to us, by our supplier. In addition, the main purpose of this guideline is to prevent the inclusion of environment loading substances, which are restricted by laws, regulations, etc. at the destination of our customer, into Star products.

2. Scope

This document applies to all the following procured parts, materials, and complete products, that are to be delivered to Star.

Raw Material:	Material which is to be processed for the purpose to be a part of a product. (For example: metal plate, plastic pellet)
Purchased Part:	Part which is to be assembled as a part into a product, without any process (For example: motor, PCB, IC parts)
Process Part:	Part which is processed as designed by Star for the purpose to be a part of a product (For example: metal frame, plastic case)
Auxiliary Part:	Part which is to be assembled as an auxiliary part into a product, without any process
Purchased Product:	Product which is purchased from another company for the purpose to be sold as itself (For example: external power supply)
Packing Material:	Materials which is required to pack a product (For example: paper box, plastic bag, cushion)
Auxiliary Material:	Materials which is required additionally to pack or produce a product (For example: solder, glue)

Please indicate whether any environment loading substances are contained in deliverables, whether prohibited substances (ozone layer depleting substances, and so on) are being used in production processes, and also to describe the constituent substances in terms of content amount and rate, contained locations, and purpose for their inclusions, by filling out "Environment Loading Substance Survey" and "Survey for SVHC/PFOS" which are provided separately.

Please notify the Star section in charge if any prohibited substance is contained more than its tolerance in deliverables or is being used, and whenever a change in the submitted survey data occurs due to material change, and so on.

If there is no inclusion of prohibited substances in deliverables, please submit "Declaration of non-conclusion of restricted substances in Star Micronics Green Procurement Guideline" which is also provided separately.

3. Definition of terms

1) Inclusion

The term means a substance is added, mixed, adhered to a material that is used for procured parts either on purpose or accidentally. It may occur in manufacturing process.

2) Intentional Addition

The term means that a substance is used to get better performance or change the characteristic of the procured parts.

3) Inclusion except Intentional Addition

The term means that a substance is already included in natural material, and unable to get removed completely, otherwise, mixed or adhered at manufacturing process not on purpose.

4) Inclusion Tolerance

The term means the value of substance inclusion or the maximum tolerance. When the procured parts include more than two materials, the denominator is not to be the whole part, but to be mixed material that contains defined substance.

4. Control Standard for Chemical Substance

Star has self-standard to control the substance included in procured parts, such as plastic, rubber, plating/coat/conversion treatment of metal material, paper, printing ink, etc.), by dividing into the following three criteria.

1) Criteria 1 – R (Regulated)

Substances that are subject to enacted legislation that (a) prohibits their use; or (b) restricts their use; or (c) requires reporting or results in other regulatory effects (e.g. labeling) and where the substance-specific effective date is currently in effect or scheduled to go into effect within the next 24 months.

2) Criteria 2 – A (For Assessment Only)

Substances those are likely to be subject to enacted legislation where the substance-specific effective dates of the regulatory requirements are uncertain.

3) Criteria 3 – I (For Information Only)

Substances that are not regulated but where there is a recognized market requirement for reporting their content in electrotechnical products. Reporting is used to facilitate company assessment regarding widely adopted industry environmental agreements or standards.

4. Control Standards for Chemical Substance

Substances that should be controlled are selected by the following regulations.

Please refer to the details for the above substances to Table 2 to 18.

1) Joint Industry Guideline (JIG)

These substances are selected subject to report in Joint Industry Guideline (JIG-101) that was issued by former JGPSSI. These substances are included in IEC 62474.

JIG-101 includes 6 substances which are restricted by EU RoHS Directive, and other restricted substances by major regulations.

2) Substances of Very High Concern (SVHC)

EU Commission has been issuing the list of SVHC, which is defined by RU REACH Regulation. In this guideline, the subject is the latest 173 substances that are in the 1st list to the 16th list by January, 2017. SVHC includes additional 4 substances which are restricted by amended EU RoHS Directive, and BPA (Bisphenol A).

3) Perfluoro-octyl sulphonates (PFOS)

It was banned by EU by the Regulation (2006/122/EC) since 2008.

4) Banned substances by Japanese Chemical substances Control Law

These substances may be hazardous to human body, and prohibited to use or manufacture in Japan.

5) Banned substances by Japanese Industrial Safety and Health Law

These substances may be hazardous to workers who handle the deliverables., and prohibited to use or manufacture in Japan.
